

---

Vantagepoint is the most powerful trading software for stock, forex, futures and options that money can buy. It handles all the complicated math for you with simple input. Vantagepoint's custom designed algorithms are built to identify profitable opportunities in virtually any market conditions. Whether you are an active day trader or an investor looking to grow your portfolio over time, Vantagepoint has a plan that's perfect for your needs. The VantagePoint Trading Software enables traders to make more accurate decisions about when to enter and exit trades by providing research tools that automate the entire analytical process of finding stocks across any sector with proven performance records. Vantagepoint also offers real-time streaming quotes, charts, news and portfolio tracking. Vantagepoint uses a proprietary investment process to determine the best entry and exit points for trading any financial instrument including stocks, futures, forex or options. The Vantagepoint proprietary investment process is the result of years of research & development by its founders. This makes Vantagepoint stand apart from other technical analysis software programs in areas such as an intelligent Intraday strategy which identifies historically profitable patterns in real-time using predictive algorithms to identify high probability trade setups with low risk/reward scenarios along with rules for stopping losses before they happen. Vantagepoint is designed to run on multiple platforms such as Windows XP, Vista, Windows 7, Windows 8, Mac OS X. Vantagepoint supports all of the most popular technical analysis indicators including volume price analysis, moving averages, relative strength indicators and more. Vantagepoint is the only software platform that has a custom designed algorithm for predicting market reversals so you can profit from volatile markets by finding low-risk entry points with high probability trade setups. Vantagepoint's intelligent Intraday strategy also makes it possible to harvest profits during times of low volatility by identifying historically profitable patterns using predictive algorithms to identify high probability trade setups with low risk/reward scenarios along with rules for stopping losses before they happen. Vantagepoint's proprietary proprietary trading process also anticipates the onset of volatility which reduces risk and increases profitability during sharp market reversals. Vantagepoint Trading Software is a software platform that covers all of the most popular technical indicators. The platform offers comprehensive support for a range of trading instruments including stocks, futures, forex, and options. Vantagepoint's Custom Designed Algorithms can be used as custom indicators or as part of module building blocks to create your own custom indicator packages. The platform offers over 600 custom indicators. Vantagepoint's method of analyzing the performance of investment strategies is completely automated to eliminate the need for manual interpretation of historical data. Vantagepoint has an international team that continues to monitor the financial markets around the world for new trading opportunities or major changes in market dynamics that are likely to affect all types of investments. Vantagepoint's proprietary proprietary trading process also anticipates the onset of volatility which reduces risk and increases profitability during sharp market reversals.

The VantagePoint custom built algorithms are designed to identify profitable opportunities in virtually any market conditions.
